## System Description

The main purpose of the project is to manipulate PDF documents using two main functions; the split and merge functions. The PDF Editor tool will be able to perform two of the main functions that simple functions that involve either inputting or output one or more PDF files.

## Audience

This tool is for people who need to perform these manipulations on PDFs, whether they do so often or on the very rare occasion. Users who are more skilled using computer programs will find the program convenient and intuitive.

## Interesting Items

- Appending .pdf
- The string array allows for easy passage of the data from the text field

## Problems encountered

- Learning more about PDFBox<sup>®</sup>
- Learning how to use Apache PDFBox<sup>®</sup> library
- JavaFX

## Lessons Learned

- More familiar with PDFs
- Learned how to make UI
